

## PRESS RELEASE

### IMP Aerospace Announces Participation in the Government of Canada's Net-Zero Challenge

IMP Aerospace is pleased to announce its participation in the Government of Canada's Net-Zero Challenge. By joining this national initiative, IMP Aerospace is taking an important first step toward developing a structured plan to achieve net-zero greenhouse gas emissions by 2050.

As part of our participation, IMP Aerospace will:

- Develop a preliminary net-zero plan within 12 months and a comprehensive plan within 24 months;
- Establish interim emissions-reduction targets aligned with achieving net-zero by 2050;
- Report annually on our progress and update our net-zero plan at least every five years;
- Submit all required participation checklists to ensure compliance with the program's standards.

As a leader in Canadian aerospace sustainment and support, IMP Aerospace recognizes the importance of environmental stewardship within our industry. Reducing emissions associated with aerospace operations spanning facilities, manufacturing processes, and supply chain activity, is essential to ensuring a more sustainable future for both our sector and our communities.

IMP Aerospace looks forward to developing its net-zero roadmap and aligning our operations with Canada's climate goals.
